# 1 Support for Inter Wiki links

(since 0.10)

## 1.1 Definition

An Inter Wiki link can be used for referring to a Wiki page located in another Wiki system, and by extension, to any object located in any other Web application, provided a simple URL mapping can be done.

At the extreme, Inter Wiki prefixes can even be used to simply introduce links to new protocols, such as `tsvn:` used by Tortoise Svn?.

## 1.2 Link Syntax

`<target_wiki>(:<identifier>)+`

The link is composed by the targeted Wiki (or system) name, followed by a colon (e.g. `MeatBall:`), followed by a page specification in the target. Note that, as for Inter Trac prefixes, **Inter Wiki prefixes are case insensitive**.

The target Wiki URL is looked up in the Inter Map Txt wiki page, modelled after MeatBall:InterMapTxt.

In addition to traditional Inter Wiki links, where the target is simply *appended* to the URL, Trac supports parametric Inter Wiki URLs: identifiers `$1`, `$2`, ... in the URL will be replaced by corresponding arguments. The argument list is formed by splitting the page identifier using the ":" separator.

## 1.3 Examples

If the following is an excerpt of the Inter Map Txt page:

```
= InterMapTxt =  
== This is the place for defining InterWiki prefixes ==
```

```
Currently active prefixes: [[InterWiki]]
```

```
This page is modelled after the MeatBall:InterMapTxt page.  
In addition, an optional comment is allowed after the mapping.
```

```
----
```

```
{{{  
PEP      http://www.python.org/peps/pep-$1.html           # Python Enhancement Proposal $1  
Trac-ML  http://thread.gmane.org/gmane.comp.version-control.subversion.trac.general/$1 # Message $1 in  
  
tsvn     tsvn:                                           # Interact with TortoiseSvn  
...  
MeatBall http://www.usemod.com/cgi-bin/mb.pl?  
MetaWiki http://sunir.org/apps/meta.pl?  
MetaWikiPedia http://meta.wikipedia.org/wiki/  
MoinMoin http://moinmoin.wikiwikiweb.de/  
...  
}}}
```

Then,

- `MoinMoin:InterWikiMap` should be rendered as MoinMoin:InterWikiMap and the *title* for that link would be "InterWikiMap in MoinMoin"

## Inter Wiki

- `Trac-ML:4346` should be rendered as [Trac-ML:4346](#) and the *title* for that link would be "Message 4346 in Trac Mailing List"
-
